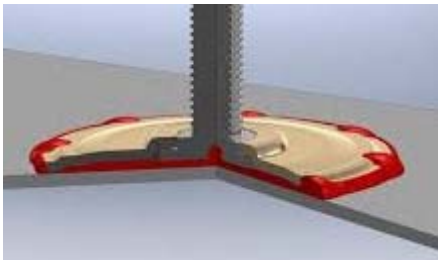
Spida Fixings

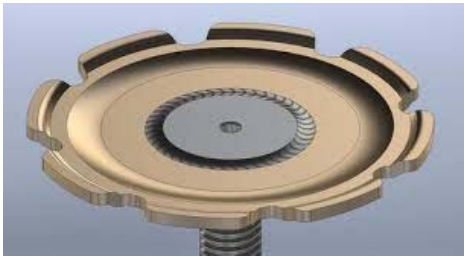
Patented fasteners designed by composite engineers to provide increased strength and reduced building times with **no drilling**.

- Castellated base and proprietary adhesion technology provides **24%** more **torsional strength**.
- High-performance manganese-boron alloy, stainless steel and engineering thermoplastics — **2,000 options**.
- Developed for **weight-, performance-** and **cost-critical** marine, automotive and aerospace composite and metal applications.
- Designed to **dissipate stress** in composite and metal structures and **speed assembly.**

Spida Fixings

Patented castellated base





Spida™ metal stud is welded to Grippa base and bonded to panel using proprietary surface enhancement and adhesion system.
