

Strand Composite

Prepreg scrap from composite parts production is presently sent to landfills. Instead, it can be cut into strands, assembled in sheets, and **press-formed** into high-value 3D parts.

- **Parts performance** of aluminum but at much less weight.
- Helps to make composites **sustainable**.

Aileron Skateboard is a successful commercial product made from aerospace prepreg scrap, manufactured in a low-cost, scalable system.

We take scrap from rockets and turn that into premium carbon fiber skateboards
